Contents of volume 38

Research Papers

Deterministic and stochastic evolution equations for fully dispersive and weakly nonlinear waves
Y. Eldeberky and P.A. Madsen 1

Medium-term frequency distributions of cross-shore suspended sediment transport rates in water depths of 3 to 9 m
B.G. Ruessink, K.T. Houwman and P. Hoekstra 25

Technical Note

A weakly dispersive edge wave model
A. Sheremet and R.T. Guza 47

Research Papers

Sinking/floatation of pipelines and other objects in liquefied soil under waves
B.M. Sumer, J. Fredsøe, S. Christensen and M.T. Lind 53

Non-linear propagation of unidirectional wave fields over varying topography
F. Becq-Girard, P. Forget and M. Benoit 91

Suspended-sediment reference concentration under waves: field observations and critical analysis of two predictive models
M.O. Green and K.P. Black 115

Modelling of morphological changes due to coastal structures
I.O. Leont'yev 143

Separation of incident and reflected waves over sloping bathymetry
T.E. Baldock and D.J. Simmonds 167

Wave plus current over a ripple-covered bed
J. Fredsøe, K.H. Andersen and B. Mutlu Sumer 177

An active wave generating–absorbing boundary condition for VOF type numerical model
P. Troch and J. De Rouck 223

Technical Notes

Experimental evidence of the transition between power law models in the high frequency range of the gravity wave spectrum
G. Rodríguez, C. Guedes Soares and F.J. Ocampo-Torres 249

Flow resistance in the coastal zone
K.T. Houwman and L.C. Van Rijn 261

Contents of volume 275
